how does the dashboard reflect these changes

Edison, Dutton

The screenshot displays the FoundationPREv-CRC patient portal for Order #7892345. The interface includes a top navigation bar with the FoundationPREv-CRC logo, a search bar, and user information. The main content area shows a timeline of events: Order placed, Blood drawn, Specimen delivered, and Testing in progress. Below this, there are sections for patient information, test results, and a list of tests. Annotations highlight specific features and areas for improvement:

- could be similar/same, but with reports here**: Points to the 'Testing in progress' status.
- PDF viewer here?**: Points to the 'Download Report' button.
- sidebar with multiple products/tests**: Points to the 'Test Menu & Results' section.
- how to handle amended reports? (ex IOU + CLIA currently)**: Points to the 'Test Menu & Results' section.
- collapsed by default**: Points to the 'Test Menu & Results' section.
- make sure we still show un-amended reports, but amended lives on too**: Points to the 'Test Menu & Results' section.
- How does this look for monitoring??**: Points to the 'Billing' section.
- can this live in the patient view? holistic view of progress**: Points to the 'Comments and Attachments' section.

Design Sprints

Patients List

Purpose

Primary way of browsing patient information. View patients by most recent report and see top-level genomic findings. In the future, allow the user to perform deep interactions with patient records including robust filtering and cohorting.

Antipurpose

Showing order information, providing full results for each patient.

Features / Widgets

First columns shows whether the patient has an order in progress or an unread report available.

DOB & MRN

Primary discriminators for patients that share a name or are otherwise easily confused.

Last Reported

Sorted column by default, intended as a way of defining which patients are "recent"

Tumor Type & Genomic Findings

Top level medical information, used in future state for grouping similar patients together. nNecessary for parity with legacy portal.

Use cases for the patient page:

- As a user, I need to build patient cohorts so that I can download and compare their results
- As a user, I need to see my patients that have had recently had FMI tests
- As a user, I need to see any patients with orders in progress
- As a user, I need to see top-level genomic findings before diving into a particular patient
- As a user, I need to search patients by date of birth, in the case that I have multiple patients with the same name
