

Project Phoenix

As part of a organization-wide mandate to migrate Foundation Medicine's products, data, back-, and front-end systems to the Salesforce platform, the Product Design team is redesigning our comprehensive genomic test ordering portal and test results platform. The design strategy is focused on elevating Foundation Medicine's genomic testing experience to support a robust, patient-centric experience for oncologists.

Challenges → Opportunities

Genomic data is
being
re-architected

Products will
move onto
Salesforce
platform

Backend
systems and UI
will be integrated

Current ordering
experience is not
meeting
customer needs

Competitors are
offering more
tests and better
experiences

Foundation Medicine has identified the need to consolidate and re-architect its vast amount of genomic data to continue to deliver on our core promise of providing actionable clinical insights to our customers.

Project Phoenix will focus on modernizing our data architecture to ensure scalability, matching and exceeding our competitors' offerings, and reimagining the ordering experience for our customers.
